

BASE-0 LEVEL1 WALKWAY Assembly Guide

This is a step by step guide how to assemble the BASE-0 LEVEL1 WALKWAY. You can follow the same basic steps to assemble the BASE-0 LEVEL2 WALKWAY.

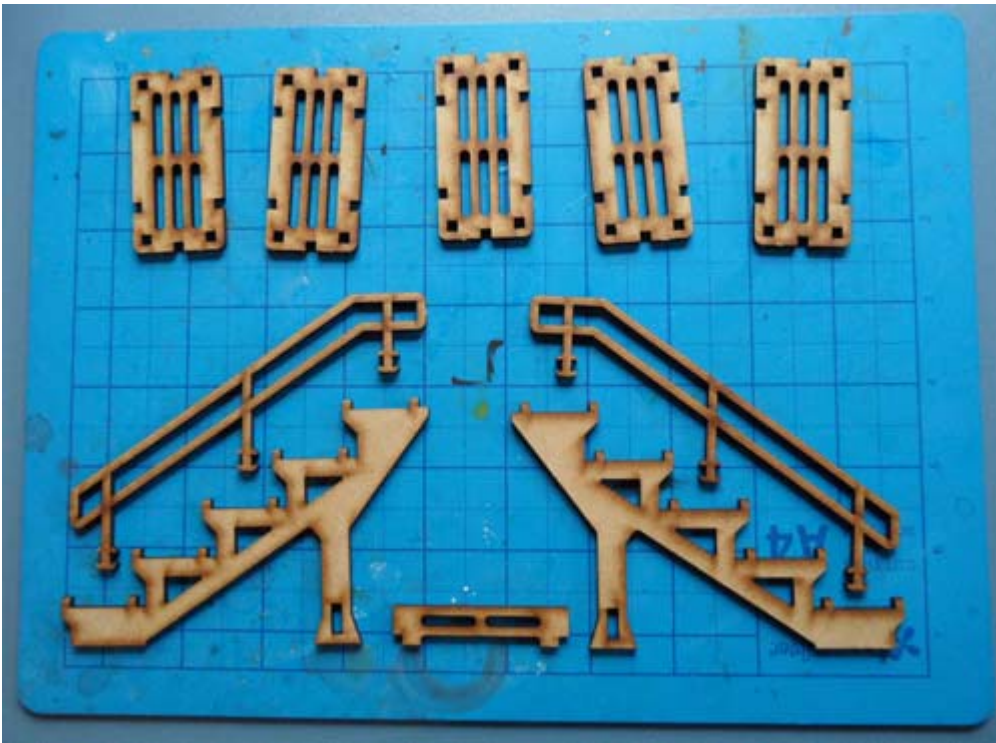

Set contents:

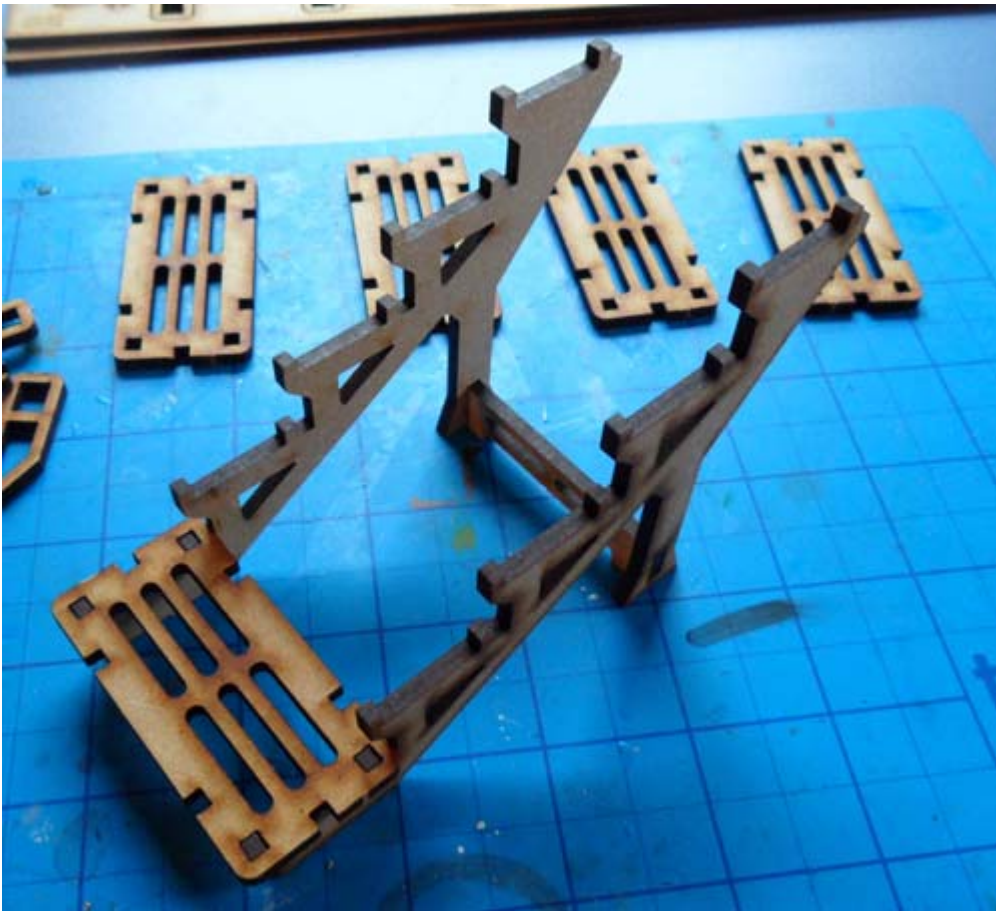

The individual parts are held in the frame by small uncut sections. You will need an X-Acto knife to cut them free and also to cut away any excess material.

For gluing it's best to use white wood glue. But before you glue anything, first dry-fit the parts and make sure that everything is assembled correctly.

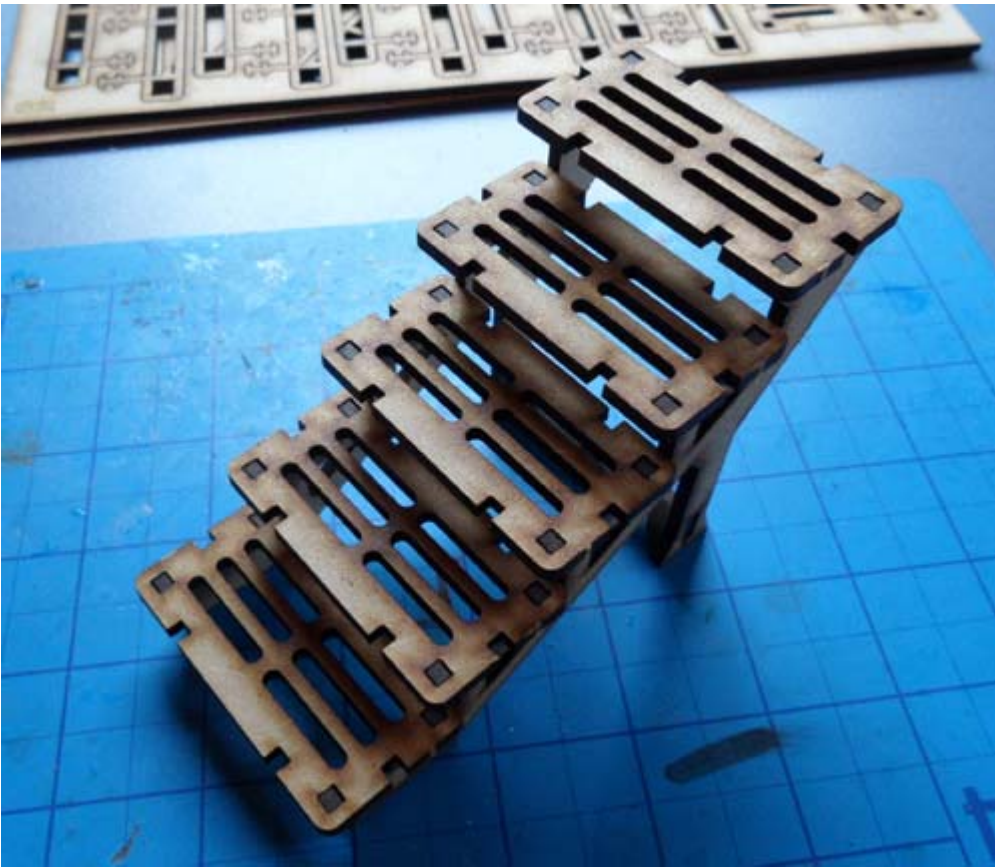

These are the parts needed to assemble the stairs:

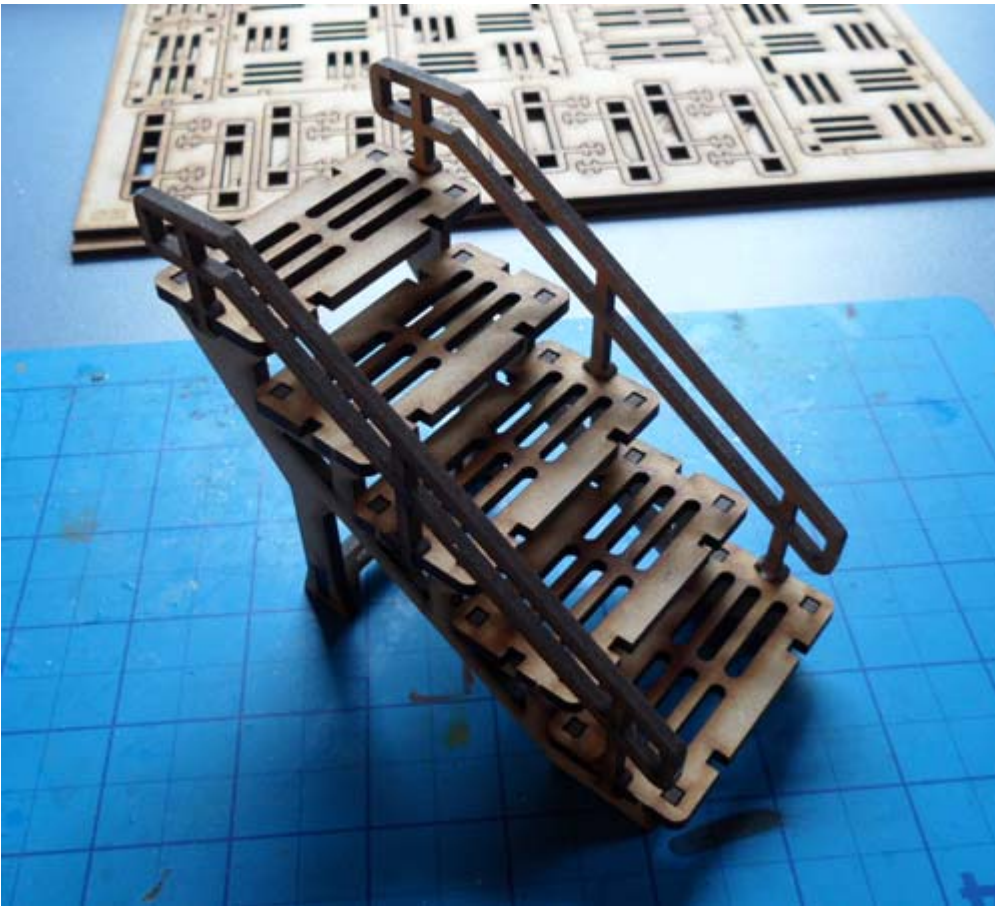

Start by putting together the two side parts and the narrow bit that goes between the two legs.

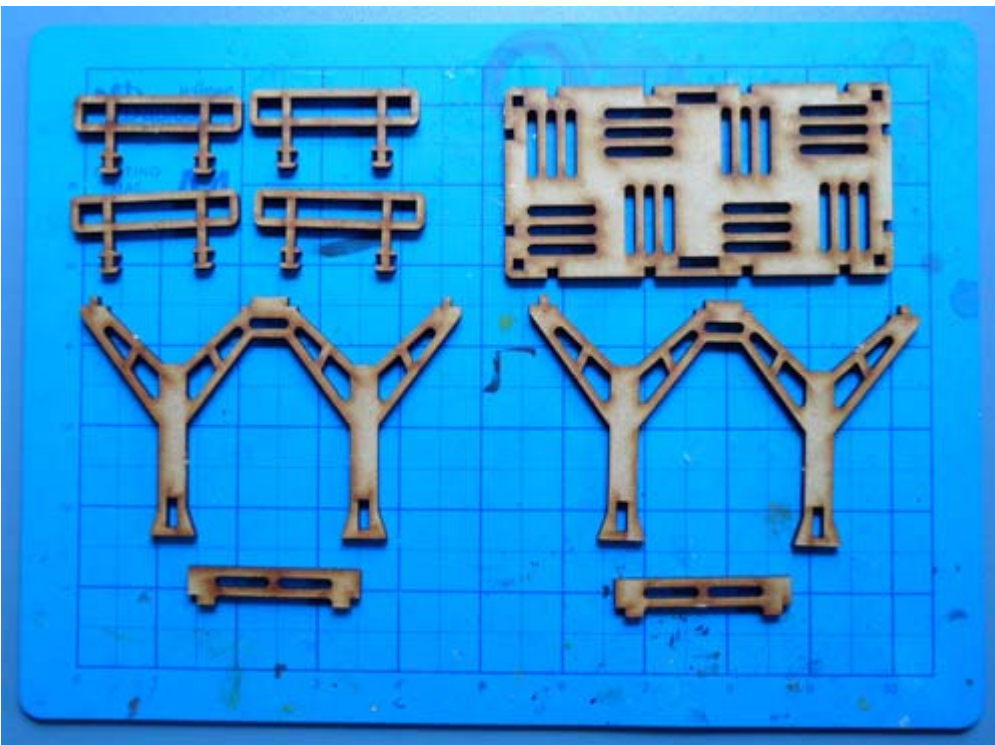

Next put on the five steps.

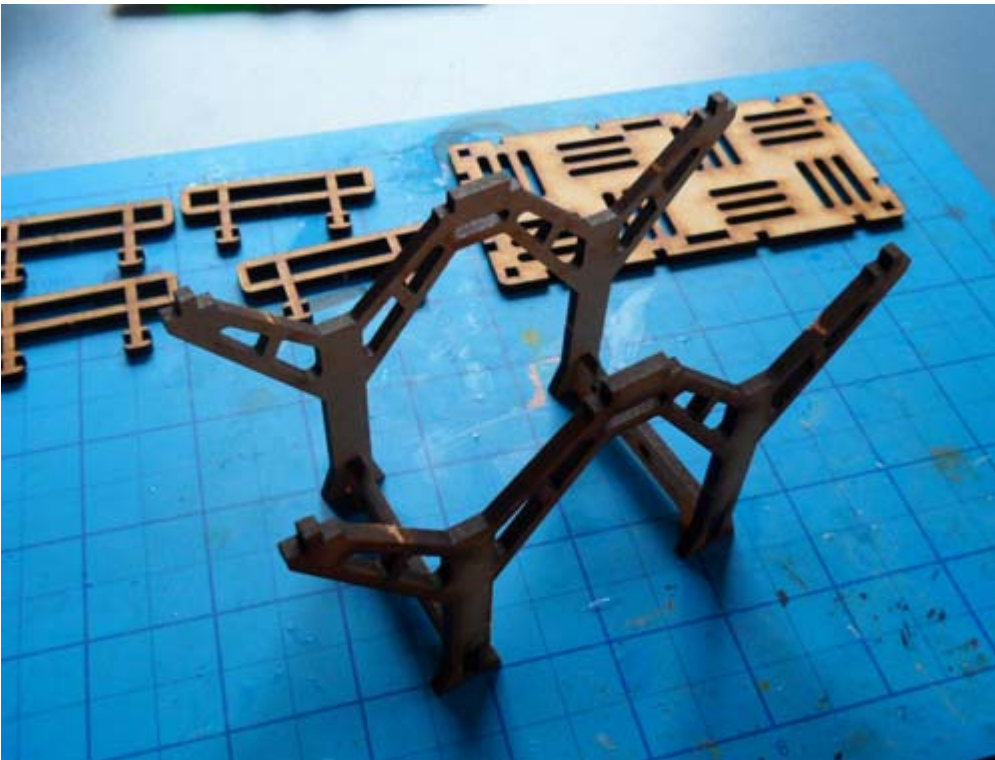

Finish the stairs by adding the railing from the sides. Repeat all this for the second stairs.

These are the parts needed to assemble the short walkway section:

Again start by putting together the two side parts and the two narrow bits that go between the legs.

Next put on the flat top part.

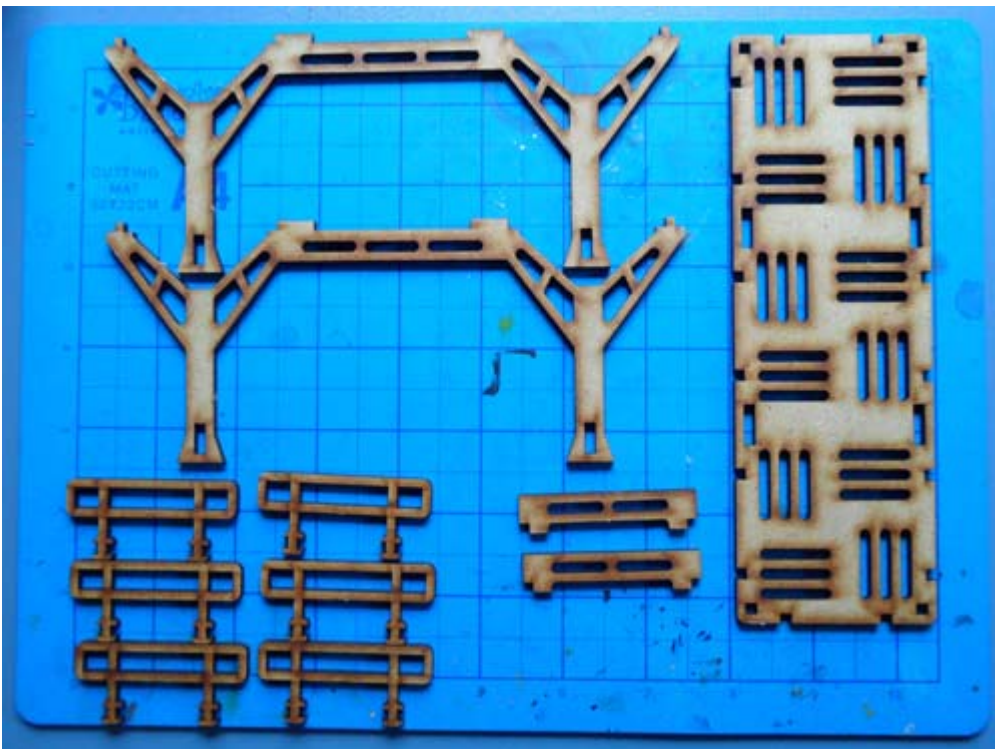

Finish the section by adding the railings from the sides. DON'T glue them on, so that you can change their

positions for different gaming set-ups. You'll probably find that the railings don't fit tightly enough. This is normal and they will fit much better once the terrain is painted.

Repeat all this for the second section.

And these are the parts needed to assemble the long walkway section:

For assembling the long section just follow the same steps as for the short section.

When you're finished the set should look like this:
